

**Effectively manage your
inventory levels and
improve your stock accuracy
with eStockCheck**

Accurate stocktaking underpins strong inventory management

Ensuring that your inventory levels are as expected is vital to your business. Not having the quantity of a product you expect on hand can lead to poor customer service, lost business, and expensive write-offs. Equally, having more stock than anticipated can lead to costly overstock and obsolescence. Therefore, ensuring your stock levels are accurate so you can commit to customer deliveries is key to your success.

With eStockCheck, you can ensure your stock levels are always accurate and up to date.

Manage your inventory levels effectively

Within a busy warehouse, stocktaking can be both a time-consuming and generally disruptive operation. Freezing all physical stock movements, taking people away from their day jobs to count the stock, filling out count details on sheets of paper, collating and then inputting the results and managing any discrepancies encountered are all very challenging tasks. Indeed, many businesses will elect to undertake this activity out of hours, increasing further the expense of a full stocktake.

You need a solution that is quick to deploy and that can help you reduce the complexity, expense and time taken to accurately count and update your stock.

eStockCheck is designed to improve efficiency and reduce errors. The intuitive app, available on both Android and iOS devices, empowers users to undertake counts during the day quickly and efficiently.

Utilise staff resources efficiently

With eStockCheck, you can now streamline this process, eliminate many of these costly errors, and significantly reduce the time to manage stock counting activities. Full, Partial and Perpetual Inventory (PPI) counts can be initiated within the IQ system.

On-demand, or random, stocktaking is also available. This will enable your staff to utilise their time effectively, recording ad-hoc stock checks on targeted products or bins. All counts are immediately recorded within IQ, and any discrepancies are brought to management's attention. Once satisfied with the results, the stock will be adjusted automatically to reflect the correct values, accounting for any discrepancies.

- Select items by entering the product or scanning the barcode
- Scan each item individually or enter the total quantity found
- Utilise mobile phone or other Android device when counting
- Optionally view product images whilst counting
- Quickly identify product count discrepancies with colour legends

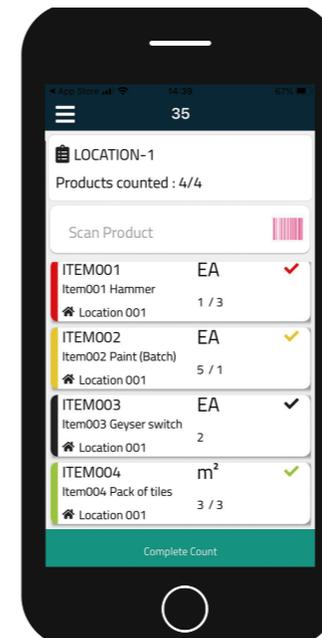

Count the right products at the right time - every time!

With eStockCheck, you can now manage the count process efficiently and easily. This intuitive app allows you to distribute stock counts amongst nominated staff and for each to undertake their own counts, ensuring no duplication. This allows you to divide sections of the store and warehouse amongst different individuals for counting purposes, ensuring an efficient count and making the best use of available resources.

Multiple users can count stock simultaneously

With eStockCheck, users are guided to each bin in turn to count the stock or may select the bin that they wish to count. Utilising the built-in scanner on the device to scan products and bin barcodes, they can ensure that they have chosen the right product.

Instant updates reduce errors and improve accuracy

Users can scan and count products, and may also scan bin and batch details where required. They can quickly identify stock shortfalls and record where a product has been found together with any batch, bin, or warehouse details.

As each product is counted, the results are immediately updated within your IQ system. Your management team will have full visibility of counts in progress and can be immediately notified of any discrepancies found. They can then take the appropriate corrective action. Once happy, they can automatically update your inventory to reflect your true stock availability.

eStockCheck simplifies the counting process; it's easy!

With eStockCheck, you will be prompted to record the correct details for the appropriate product. So, there's no need for any specialist knowledge. The app will ensure that the user records the details you need for a successful stocktake. This simplified approach means that your staff do not require detailed product knowledge; they will be prompted as needed and can record all the necessary information.

Supports multiple product types, including volumetric, batch and report-to-item based products.

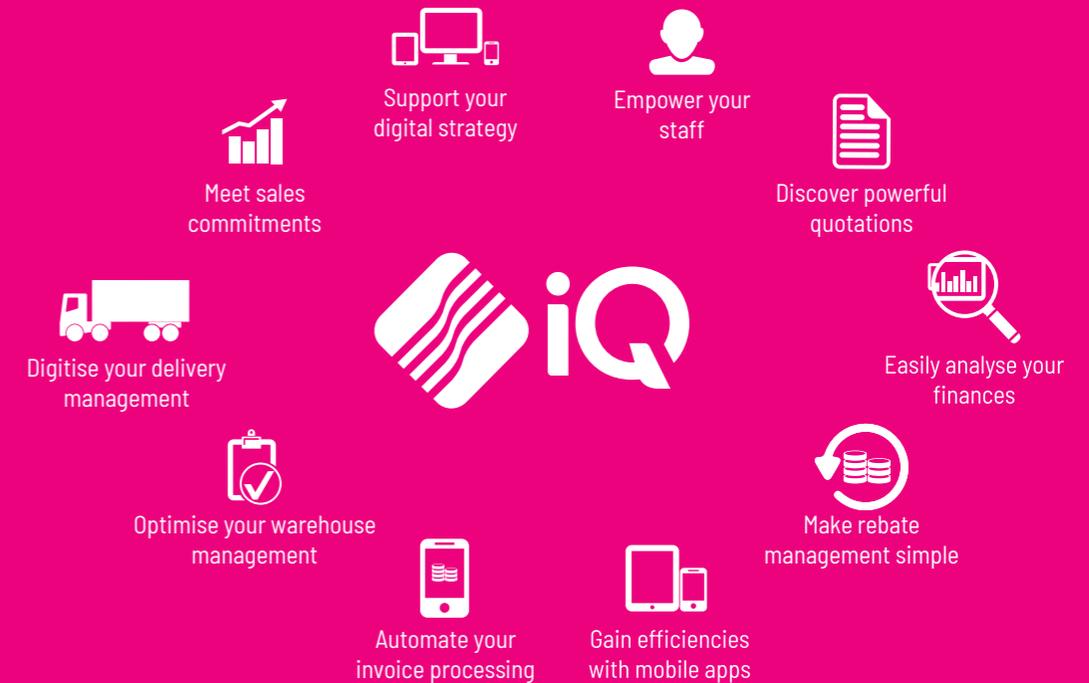

Enables full, partial, perpetual, and on-demand stocktaking by product, bin, and warehouse. Count stock while trading.

IQ: The strong digital platform for your future

Go digital, grow profits

Wherever your business is on its digital journey, growing profits can be made easier with the right platform to keep you moving. IQ is the digital platform designed for your business that helps you easily integrate and manage your core processes now and for years to come.

The latest version of IQ has all the tools you need to deliver your digital strategy and allow you to compete better in the connected world. So go digital now and grow profits for the future.
