Offline Point of Sale for your K8 system

Continue to serve your customers at the counter with ease when connectivity to your main K8 server has been lost.

Don't allow internet outages to stop you from serving your customers!

With OfflinePOS, power outages or loss of network connectivity does not bring your business to a halt. Continue to serve your customers at the counter using this highly intuitive point-of sale interface.

Synchronized with your main K8 system regularly, the Offline point of sale stores details of your customers, including any price terms, and is ready and available at the click of a button should you lose connectivity to your main server.

What's even better is that once connectivity is restored, all of the transactions recorded, together with inventory issues and payments against sales are automatically transferred to your K8 system and you now have a complete and accurate record of sales made during this period. You can then log back into K8 and continue to operate as usual, secure in the knowledge that your system is right up to date.

Solution that enables capture of sales when connectivity to K8 is lost.

Intuitive POS interface that supports:
- Collect & Credit Sales
- Instore credit

Up-to-date customer prices and terms synchronized with K8

OfflinePOS has been designed to ensure that your sales staff can continue to process sales at the counter with minimal disruption. Utilizing an almost identical POS interface, your users are completely familiar with the software in operation. Once processing within OfflinePOS, they can access all of the product information that you have created within K8 and process cash or collect sales for your trade and consumer customers. They can search for customers, find products and have customer customer specific terms or any promotional prices you are offering applied automatically to the sale.

Once the sale has been completed, you can print customer documentation to accompany the goods and your customer is then on their way. It's quick, it's efficient – and what's even better is that, as you don't need to re-key any of this data when K8 becomes available again, it is accurate and up to date.
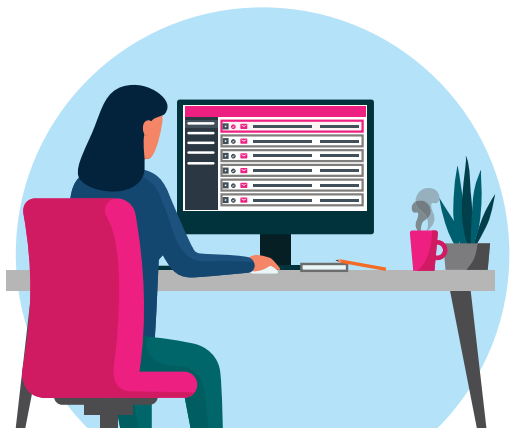

Key master records synchronized with your K8 system on a timed schedule.
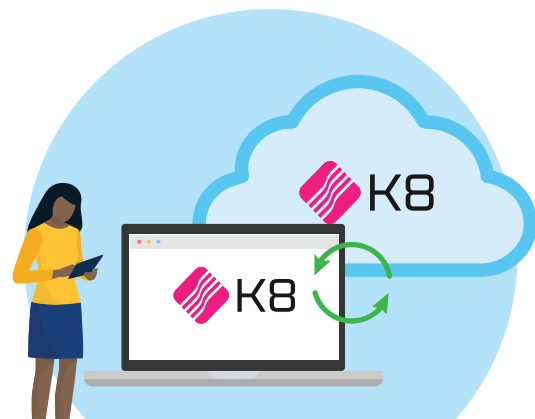

Sales orders automatically uploaded when K8 system become available.

Your business. Your way.

K8 OfflinePOS features at a glance

This comprehensive offline point of sale solution offers many of the features that are available to process cash and collect sales when you are online. These include:

- Intuitive, simple to use touch screen interface
- Process cash & collect sales at the counter
- Generate credit notes and refunds
- Access customer and product related data
- Utilize up-to-date customer terms and promotional prices
- View accessories and alternatives

- Capture customer signature for each sale
- Record payments received against sales for easy reconciliation
- Print customer documentation, including receipts and collection notes
- Your data is automatically synchronized with K8 when online, no re-keying of transactions
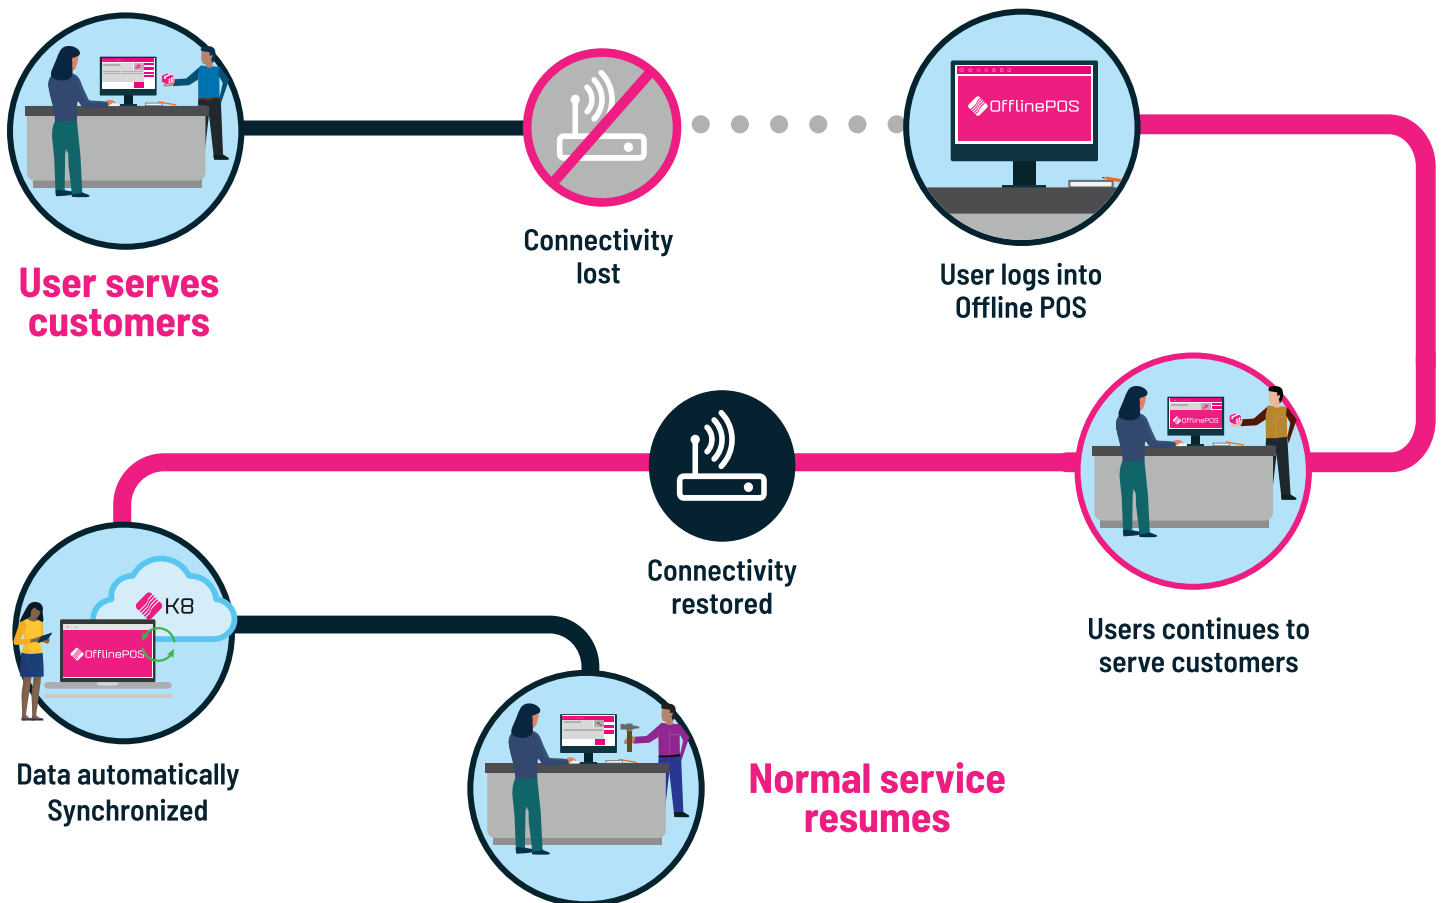

OfflinePOS – how does it work?

You install the software locally on a small server. OfflinePOS then automatically synchronizes with your main server and keeps a local copy of your customer, product and pricing data. All changes made in the normal course of the day will also be synchronized.

When connectivity to your K8 system is lost, be that through power outages or perhaps the network connection is lost due to accidental damage or a white out, then you simply click on the icon on your desktop, log in using your secure credentials and you can continue to make cash and collect sales for your customers. You can record payment details manually on each sale and you can also raise quotes for your customers, ensuring that you can capture any potential business opportunities.

What's more, as all sales made, quotes raised or credits generated are automatically transferred to your main server when connectivity is resumed, all of your accounting, inventory and finance records are also updated. This ensures that you can keep control of your business, despite the disruption.

It doesn't matter if you lose connectivity for a few minutes or a few hours, you can rest assured that you can then continue to trade while you wait for it to be restored. Once normal service has resumed, all of the sales captured are automatically transferred to your main K8 system, ensuring you have a full record of all sales and inventory issued. It's that simple!

User serves customers

Connectivity lost

User logs into Offline POS

Users continues to serve customers

Connectivity restored

Data automatically Synchronized

Normal service resumes
